Are you experiencing fierce competition & shrinking margins?
There are substantial prospective savings available in inbound and outbound LTL and truckload freight costs.

Presently, do you:

- Understand your supplier and customer locations relative to your facility?
- Have “delivered” pricing from your suppliers?
- Regularly analyze your freight spending habits and cost performance indicators?
- Monitor and enforce vendor compliance to your established shipping standards?

How it works:

We offer a zero-risk analysis of 2 to 3 months of your less-than-truckload (LTL) shipping spend. This review includes a detailed breakdown of fees, surcharges, class determination, and dimensionalization. Based on our findings, we'll provide an annualized savings estimate, with typical savings ranging from 25% to 40% if you join our Partnership Program.

The savings identified will flow right to your bottom line, as you will begin receiving the discount on the first invoice from the recommended carriers. Plus, no additional time or internal resources are required to gain the savings because using the program will actually reduce the time spent by your staff on transportation management.

The positive cashflow savings accumulates year over year, and they can be used to fund other high priority improvement projects in your business. In addition, if you sign up with our program in before October 1st 2025, and use it for 1 full year, we will rebate you 1.5% of your savings cost share fee as a credit for the next years cost share fee.

The analysis is free and there are NO upfront costs, so why not let us do the leg work and determine if you are paying too much for freight services? We are ready to partner with you and discover some inflation busting savings with an immediate ROI.
